the complexity of modern chip design requires extensive use of specialized software  
throughout the process to achieve the best results a user of this software needs a high  
level understanding of the underlying mathematical models and algorithms in addition  
a developer of such software must have a keen understanding of relevant computer

science aspects including algorithmic performance bottlenecks and how various algorithms operate and interact this book introduces and compares the fundamental algorithms that are used during the ic physical design phase wherein a geometric chip layout is produced starting from an abstract circuit design this updated second edition includes recent advancements in the state of the art of physical design and builds upon foundational coverage of essential and fundamental techniques numerous examples and tasks with solutions increase the clarity of presentation and facilitate deeper understanding a comprehensive set of slides is available on the internet for each chapter simplifying use of the book in instructional settings this improved second edition of the book will continue to serve the eda and design community well it is a foundational text and reference for the next generation of professionals who will be called on to continue the advancement of our chip design tools and design the most advanced micro electronics dr leon stok vice president electronic design automation ibm systems group this is the book i wish i had when i taught eda in the past and the one i m using from now on dr louis k scheffer howard hughes medical institute i would happily use this book when teaching physical design i know of no other work that s as comprehensive and up to date with algorithmic focus and clear pseudocode for the key algorithms the book is beautifully designed prof john p hayes university of michigan the entire field of electronic design automation owes the authors a great debt for providing a single coherent source on physical design that is clear and tutorial in nature while providing details on key state of the art topics such as timing closure prof kurt keutzer university of california berkeley an excellent balance of the basics and more advanced concepts presented by top experts in the field prof sachin sapatnekar university of minnesota

annotation this book constitutes the refereed proceedings of the 13th annual international symposium on algorithms and computation isaac 2002 held in vancouver bc canada in november 2002 the 54 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from close to 160 submissions the papers cover all relevant topics in algorithmics and computation in particular computational geometry algorithms and data structures approximation algorithms randomized algorithms graph drawing and graph algorithms combinatorial optimization computational biology computational finance cryptography and parallel and distributed algorithms

the range of issues considered in graph drawing includes algorithms graph theory geometry topology order theory graphic languages perception applications and practical systems much research is motivated by applications to systems for viewing and interacting with graphs the interaction between theoretical advances and implemented solutions is an important part of the graph drawing field the annually organized graph drawing symposium is a forum for researchers practitioners developers and users working on all aspects of graph visualization and representations the preceding symposia were held in montreal gd 98 rome gd 97 berkeley gd 96 passau gd 95 princeton gd 94 and paris gd 93 the seventh international symposium on graph drawing gd 99 was organized at st. r n castle in the vicinity of prague czech republic this baroque castle recently restored as a hotel and conference center provided a secluded place for the participants who made good use of the working atmosphere of the conference in total the symposium had 83 registered participants from 16 countries
